

SHAKE HANDS WITH THE SUPER GRIP

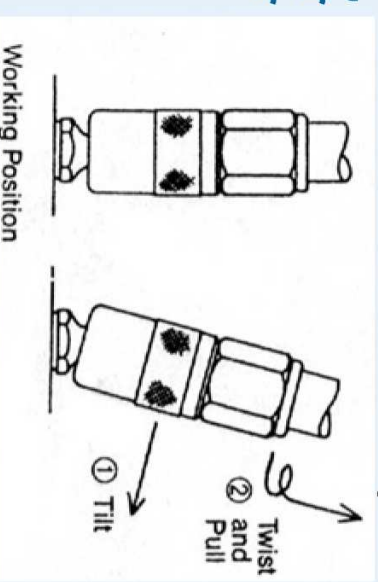

The grease coupler you choose is a vital As the KY SUPERGRIP is manufactured to component of any greasing system. More internationally recognised SAE standards, you can often than not, difficulties with grease flow can be be sure that it seals at up to an angle of 10°, traced back to that small, understated item making the task of one-handed greasing far attached to the end of your grease gun. easier without the concern for leaks or the coupler popping off the grease fitting.

Many couplers in the market have four jaws, and although they may take less effort to attach and remove, the downside is this also means more frustration as they often dislodge during greasing.

The Macnaught KY SUPERGRIP grease coupler is a welcome addition in any greasing system, and comes standard with all Macnaught grease guns.

For more information, please contact your Territory Manager or the number below.

The KY SUPERGRIP™ however, has a superior three-jaw design. The larger jaws mean greater contact area with the grease nipple and better overlap with the grease nipple's profile, ensuring maximum grip. When it goes on, it stays on, and with a tilt, twist and a pull (as per the diagram below), it lifts right off when you're done.
