

Macnaught high flow grease pump now available

Macnaught is pleased to announce that the R5000G high flow pump is now available. With a grease output of approximately 630g per minute at free flow, the R5000G complements Macnaught's already extensive range of air operated greasing equipment.

The R5000G is a high performance, high pressure 58:1 ratio pump designed to fit 180 kg (400lbs) grease containers. It has a strong metal 4" diameter air motor and a silencer that is incorporated into the aluminum alloy pump body to ensure the pump works quietly. The pump includes an air line lubricator and handles up to and including NLGI No.2 grease. The R5000G is ideal for inclusion into large installations with long pipe runs.

As with all Macnaught design equipment, this pump is backed by an astonishing ten year product warranty and ten year parts guarantee.
