

## RELOADED: THE HG60 ELECTRONIC OIL CONTROL GUN

One of Macnaught's popular metered oil control guns is the HG60. It features an electronic display, pre-set automatic shut-off function, rigid extension and automatic non-drip nozzle. It is suitable for oils up to SAE 140 viscosity at +/- 0.5% accuracy. With 1/2" inlet and dual outlets, it has a pressure rating of up to 10 350 kPa (1500 psi) and a flow rate up to 30L per minute.

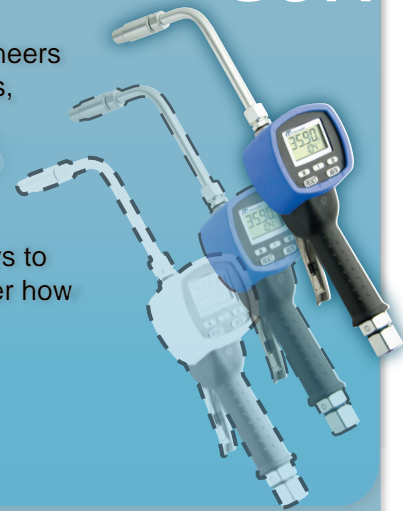

The electronics of Macnaught's HG60 have recently been enhanced with Macnaught engineers upgrading the reed switches, making them more robust. Design engineer David Evans says, "This enhancement further advances the integrity of the product."

The latching mechanism on the HG60 has also been strengthened to avoid accidental breakage if dropped in the workshop.

"We really are dedicated to quality in design," remarks David, "we're always looking at ways to further develop the build quality of each Macnaught product; we're never satisfied, no matter how robust they already are."

"And they are." He adds.

## Fluid Management System

A single or networked combination of up to 16 product controllers, each controller supports up to 26 fluids, and each controller can dispense up to 10 products simultaneously.

TYPICAL fluids handled include: motor oil, automatic transmission fluid, anti-freeze, hydraulic oil, diesel, fuel additives, and specialty fluids.

THERE are two models available: the FMS-10 and FMS-26, which support ten and twenty-six products, respectively.

### Features

- Full colour, alpha numeric touch screen entry
- Easily configured to fit different facilities
- Easily integrates with dealership systems
- Wiring and configuration diagram automatically generated by software
- Visual alarm and email advice when tank levels are low
- Generates reports that can conveniently be exported to Microsoft Excel®

### Optional/Special Features:

- Order number validation - allow only legitimate dispenses
- Simultaneous, multi-user remote access to current dispense data
- Low level warning for each tank

THE Macnaught Fluid Management System is purpose built for any dispensing application. Ideal for workshops and factories, the FMS is designed to allow the monitoring and control of fluid dispensement around the entire workspace from one convenient location.

IT is the superior way to maintain efficiency and precision in the workplace, while at the same time ensuring safety for workers in a clean and tidy environment.

Q: Where would I find an FMS?

A: In automotive/truck/bus/bulk transport workshops, industrial & mining, marine, airports & aeroplane hangars
