# NEW GT RAPIDFLO™ PUMP

## New Features

The new GT RAPIDFLO pump has an outlet body which is reinforced to absorb shocks if the unit is accidentally dropped or knocked.

It also has a new outlet configuration with the outlet nozzle thickened and the addition of a 3/4" BSP thread which will take a hose tail. This makes fitting the hose and accessories, such as the VA Filter kit, more secure.

A new 1" BSP thread is also included on the inlet side of the pump. This is to allow the use of a new suction tube system and allows easy fitting of CAMLOCK fittings if required (camlock not included).

VA filter kit is now the Filter accessory kit for the GT RAPIDFLO.

## Note

The GP RAPIDFLO will continue to be supported for spare parts as the internal components are fully interchangeable between the GP and GT. If a GP RAPIDFLO pump has a failure to the outlet body, GP-1K will contain the redesigned outlet body along with the hose tail adaptor GM42, hose clamp & associated components. These new parts will enhance existing GP RAPIDFLO pumps and give end users many more years of trouble free pumping.

The VA Fuel Filter is particularly recommended for diesel fuel users. The Filter Kit is complete with all fittings to enable fast, simple installation and features a 10-micron filter element & see through bowl with drain cock.

The NEW GT RAPIDFLO Pump is an upgrade of the GP RAPIDFLO Pump with new features which enhance this already robust product.

Robust aluminium housing screwed together for ease of service and maintenance

Reinforced "shock bead"

New robust 3/4" BSP threaded outlet comes complete with hose tail

Lockable handle and nozzle holder for security

Built in strainer

High flow rate with close to one litre per revolution

2.4m anti-static rubber hose compatible with un-leaded petrol and aviation fuel

Three piece suction tube with sliding bung adapter to suit various size drums
